Case Study

For the sixth consecutive year the textile manufacturers, Milliken & Company has been named one of the World's Most Ethical Companies by the Ethisphere Institute. Milliken naturally wanted to ensure that their new effluent containment bunds would not allow any leakage into the groundwater as part of their continuing commitment to protecting the environment. They asked their Facilities Maintenance Contractor, Don King Services Limited, to research and then carry out the works to the high standards that they insist on.

Don King called in **NCC** to advise on the selection of the most suitable protective, watertight system and we supplied Sika's Poxitar F epoxy-anthracene combination coating to provide the protection. This advanced system will fully harden even on damp concrete, plus to seal the joints in the concrete and block containment bund, **NCC** supplied Sikaflex PRO 3WF, a chemically resistant, polyurethane joint sealant.

To fully support both Milliken and Company and their Maintenance Contractor, **NCC** also provided or 'Site Supervision Service', to ensure the works were executed exactly to specification.
