

Flavours and Essences UK, Blackburn

Case Study

Flavours and Essences UK Ltd, the UK market leader, wanted a hard wearing, chemically resistant and easily cleaned floor for their new raw materials storage and processing areas. Flavours and Essences UK Ltd are part of Irish Country Gold and one of Europe's leading producers of food and beverage flavourings and colours. For Phase 2 of their new facilities in Blackburn, Lancashire, they wanted a hard wearing, chemically resistant and easily cleaned floor for their new raw materials storage and processing areas.

The floors had to provide a surface that was almost to 'cleanroom' environment standards, yet resistant to any of the wide range of possible chemical spillages and to being trafficked almost continuously with forklifts and stacker trucks, in order to meet the company's stringent requirements. Following NCC's proven results on Phase 1 of the project, they had no hesitation in consulting NCC once again.

NCC introduced an experienced, local Specialist Contractor and provided the ideal solution using Sikafloor Purcem 20, a high performance polyurethane resin screed, with Sikafloor 280 epoxy resin mortar for precise coving and detailing works. Sikafloor 261 was also used for producing extremely easily cleaned floor surfaces in the logistics areas.

Client:

Flavours and Essences UK Ltd

Specialist Contractor:

P J McGrath and Sons Ltd
